AMENDMENT A
Page 3

AMENDMENTS TO THE CLAIMS:

Claims 1-38 are hereby cancelled. Claims 39-78 have been added. The new listing of claims includes independent claims 39, 61, 69, and 74. All other claims are dependent. This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

Claims 1-38 (cancelled)

Claim 39 (new): A system comprising:

- a server operably connected to a computer network;
- a wireless communication device inventory database operably connected to the server comprising MIN or ESN information stored in the wireless communication device inventory database; and
- an advanced ordering server module operably connected to the server wherein the advanced ordering server module is capable of communicating with an operably connected customer workstation.

Claim 40 (new): The system of claim 39 wherein the communication between the customer workstation and the advanced ordering server module is via XML-RPC.

Claim 41 (new): The system of claim 39 further comprising a downloadable advanced ordering client module to facilitate communications between the operably connected customer workstation and the server.

USSN 09/681,968
AMENDMENT A
Page 4

- Claim 42 (new): The system of claim 40 further comprising a downloadable advanced ordering client module to facilitate communications between the operably connected customer workstation and the server.
- Claim 43 (new): The system of claim 39 wherein the customer workstation sends an inventory/price request to the server.
- Claim 44 (new): The system of claim 43 wherein the server sends an inventory/price response to the customer workstation.
- Claim 45 (new): The system of claim 40 wherein the customer workstation sends an inventory/price request to the server.
- Claim 46 (new): The system of claim 45 wherein the server sends an inventory/price response to the customer workstation.
- Claim 47 (new): The system of claim 39 wherein the customer workstation sends an order status request to the server.
- Claim 48 (new): The system of claim 47 wherein the server sends an order status response to the customer workstation.
- Claim 49 (new): The system of claim 40 wherein the customer workstation sends an order status request to the server.
- Claim 50 (new): The system of claim 49 wherein the server sends an order status response to the customer workstation.
- Claim 51 (new): The system of claim 39 wherein the customer workstation sends an order submit request to the server.
- Claim 52 (new): The system of claim 51 wherein the server sends an order submit response to the customer workstation.
- Claim 53 (new): The system of claim 40 wherein the customer workstation sends an order submit request to the server.

USSN 09/681,968
AMENDMENT A
Page 5

- Claim 54 (new): The system of claim 53 wherein the server sends an order submit response to the customer workstation.
- Claim 55 (new): The system of claim 39 further comprising a report generation server module operably connected to the server for receiving report requests from a browser located on the customer workstation and sending a report to the browser on the customer workstation.
- Claim 56 (new): The system of claim 40 further comprising a report generation server module operably connected to the server for receiving report requests from a browser located on the customer workstation and sending a report to the browser on the customer workstation.
- Claim 57 (new): The system of claim 55 wherein the report is sent to the customer workstation in html format.
- Claim 58 (new): The system of claim 56 wherein the report is sent to the customer workstation in html format.
- Claim 59 (new): The system of claim 55 wherein the report request is based on an ESN or MIN of a wireless communication device.
- Claim 60 (new): The system of claim 56 wherein the report request is based on an ESN or MIN of a wireless communication device.
- Claim 61 (new): A method of monitoring wireless communication device inventory comprising:
communicating a request for wireless communication device inventory data to a server from a customer workstation;
the server connecting to a wireless communication device inventory database comprising ESN or MIN information and

AMENDMENT A
Page 6

obtaining the necessary information to fulfill the request;
and
the server communicating a response to the customer workstation.

Claim 62 (new): The method of claim 61 wherein the communication is accomplished via XML-RPC.

Claim 63 (new): The method of claim 61 further comprising communicating report requests from a browser located on the customer workstation to the server and the server communicating a report to the browser on the customer workstation.

Claim 64 (new): The method of claim 62 further comprising communicating report requests from a browser located on the customer workstation to the server and the server communicating a report to the browser on the customer workstation.

Claim 65 (new): The method of claim 63 wherein the report is communicated in html format.

Claim 66 (new): The method of claim 64 wherein the report is communicated in html format.

Claim 67 (new): The method of claim 63 wherein the report request is based on an ESN or MIN of a wireless communication device.

Claim 68 (new): The method of claim 64 wherein the report request is based on an ESN or MIN of a wireless communication device.

Claim 69 (new): A computer readable medium comprising:
a set of instructions capable of being executed by a computer, the set of instructions further comprising:

USSN 09/681,968
AMENDMENT A
Page 7

instructions for receiving customer requests for wireless communication device inventory information;
instructions for querying a wireless communication device inventory database comprising ESN or MIN information;
instructions for communication between a server and a customer workstation; and
instructions for executing customer requests for wireless communication device inventory information;

Claim 70 (new): The computer readable medium of claim 67 wherein the instructions for communication between the server and the customer workstation further comprise instructions for communicating via XML-RPC.

Claim 71 (new): The computer readable medium of claim 67 further comprising instructions for the server receiving a report request from a browser located on the customer workstation and the server communicating a report to the browser on the customer workstation.

Claim 72 (new): The computer readable medium of claim 98 wherein the report is communicated in html format.

Claim 73 (new): The computer readable medium of claim 70 wherein the report request is based on an ESN or MIN of a wireless communication device.

Claim 74 (new): A computer program comprising a set of instructions capable of being executed by a computer, the set of instructions further comprising:

USSN 09/681,968
AMENDMENT A
Page 8

instructions for receiving customer requests for wireless communication device inventory information;
instructions for querying a wireless communication device inventory database comprising ESN or MIN information;
instructions for communication between a server and a customer workstation; and
instructions for executing customer requests for wireless communication device inventory information;

Claim 75 (new): The computer program of claim 73 wherein the instructions for communication between the server and the customer workstation further comprise instructions for communicating via XML-RPC.

Claim 76 (new): The computer program of claim 73 further comprising instructions for the server receiving report requests from a browser located on the customer workstation and the server communicating a report to the browser on the customer workstation.

Claim 77 (new): The computer program of claim 76 wherein the report is communicated in html format.

Claim 78 (new): The computer program of claim 77 wherein the report request is based on an ESN or MIN of a wireless communication device.
